

## **Sprint 2 Retro 19/09**

### *What was done / What went well?*

- Half-weekly meeting on Monday instead of Thursday
- Organised and shared tasks well overall
- Managed to get the backend working with the front end (1st pipeline - at least the get part)
- Basic functionalities for viewing and adding items successful - pending connections between frontend and backend
- Overall communication was good even if not immediate - messages were not lost and everyone was aware of decisions being made

### *What we could have been done better?*

- Didn't finish all tasks intended for the sprint
  - Rolling over "Add item/s" and "Sign-up/login" into the next sprint
- Spent more time/effort on the project
- Working around bottlenecks (where subsequent tasks of >1 person were contingent on one person's code)
- Coordinating times to work on shared tasks

### *What do we want to try next to improve?*

- Mini deadlines within the sprint, rather than a single deadline at the end of the sprint
  - 2 deadlines a week (Monday and Friday)
  - Should make it easier to accomplish all set tasks for the sprint
- More prompt communication to quickly move past bottlenecks
